Resolve Project Problems

Project Problems:

- ✓ Hamcrest binaries missing (in Unit1)
- ⚠ JUnit 3.8.2 binaries missing. (in CarsExample)

Resolve...

Description:

Beginning with Netbeans 8.1, JUnit 3.8.2 binaries were removed.

Click the resolve button to automatically update the test dependency to JUnit 4.x library definition. JUnit 4.x has a compatibility mode in order to handle JUnit 3.x testcases.

Alternatively download junit-3.8.2.jar and add it manually as your project's test dependency.
